

# THE ORIGINAL NOODLE HOUSE®

## INSTALLATION GUIDE

### Thank you for your purchase...

You have just purchased one of the finest ‘noodle’ storage and related swim accessory devices available in today’s market. All of our storage products are manufactured with Furniture Grade PVC pipe & fittings. By using 100% PVC Furniture Grade material *throughout*, ensures that our pipe will not scratch, peel, chip or flake off.

Furniture Grade PVC is superior for use due to its ultraviolet stability, impact resistance and high gloss finish. This is the same material used in manufacturing high-end medical equipment, such as wheelchairs, gurneys, walkers, etc., as well as many outdoor uses in towel racks, patio furniture, patio tables, etc. It is low maintenance and lightweight making it easy to assemble and install in your desired location.

We thank you for your recent purchase. Happy floating!

### What’s in the box...

- Installation Guide
- 2 pre-assembled top & bottom frames
- 4 upright polls
- 1 Nylon Mesh Bag insert with Velcro straps

### Optional Items for installation...

- PVC cement (not provided and not always necessary)
- Rubber mallet for securing uprights to top and bottom frames (not always necessary).

### Installation steps

1. The two enclosed “frames” are identical. One is used as the bottom of your “Noodle House”, and the other for the top.
2. For the next two steps, you can optionally apply a small amount of PVC cement, (not provided but available in most hardware stores). Our experience is this is not absolutely necessary due to the tight tolerance of the manufacturing process. However, this is up to you.
3. Insert the upright poles into the four connectors of one of the “frames”. If you are going to use PVC cement, apply a small amount to the **inside** of each of the 3-way connectors and insert the upright poles. This method of applying to the 3-way connector is suggested to minimize the cement from dripping on the upright polls.
4. Carefully place and align the top “frame” over the upright poles and gently apply pressure or gently use rubber mallet to secure in place.
5. Insert the nylon mesh bag into the center of your rack.
6. Secure the bag to the rack using the eight Velcro connectors to each corner of the rack.
7. You are now ready to use your Noodle House® .

Your Noodle House® makes it easy to store your water toy items. After each use, we recommend a quick rinse with fresh water to wash off any chlorine, salt water, sand, lake water, etc.
